

CNV heuristic by stage

Cliff's $\delta = -0.25$ (AIS vs AAH)

expression heuristic over gene axis — NOT genomically ordered (fallback); real inferCNV = future work. Cliff's δ (effect size) = -0.25; $n=8408/11592$; MWU $p=6.3e-199$. δ , not p , is the headline: at this N any $p \rightarrow 0$.
