

CNV heuristic by stage

Cliff's $\delta = +0.21$ (invasive vs AIS)

expression heuristic over gene axis — NOT genomically ordered (fallback); real inferCNV = future work. Cliff's δ (effect size) = +0.21; n=6293/13707; MWU p=1.5e-125. δ , not p, is the headline: at this N any p $\rightarrow$ 0.
