

CNV heuristic by stage

Cliff's $\delta = +0.15$ (high_grade vs low_grade)

expression heuristic over gene axis — NOT genomically ordered (fallback); real inferCNV = future work. Cliff's δ (effect size) = +0.15; n=110/159; MWU p=3.2e-02. δ , not p, is the headline: at this N any p $\rightarrow$ 0.
